

Why eMaintenance+?

Real-time data tracks and improves asset performance.

- Tightens financial control and ensures complete transparency; provides an audit trail for regulatory compliance and reporting
- Reduces the need for costly maintenance helpdesks: capturing a reactive repair request and scheduling a contractor are automated, reducing time and cost
- Improves workforce efficiency and productivity by allowing field resources and engineers to update the progress of work requests while they are on the move
- Drives improvements in contractor performance through SLA monitoring, works verification and contractor rating
- Online trouble shooter guide saves time and money through in-house repair
- Shapes user behavior and drives the way maintenance tasks are handled; eliminates hidden charges and costs in the FM supply chain
- Quick to implement, fast return on investment
- Planned preventive maintenance strategy extends the lifecycle of your assets; decreases down-time and reduces reactive repair costs
- Individual profiles provide users with relevant, real-time information, enabling informed decision-making and improved budgeting
- Provides a full audit trail of maintenance related documents and actions
- Designed to run across multiple geographies; supports all major languages and currencies
- Easy to use on-screen reports and data can be printed or exported to MS Excel
- Workflow 'drag and drop' design enables users to redefine the workflow of their operation, ensuring efficient and effective processes
- Highly scalable, flexible software which adapts as your business grows organically or through acquisition
- Fully mobile enabled, cloud-based software
- Configurable, intuitive user interface
